Back-End: Ruby, Ruby on Rails, Sinatra, Heroku, SQL, Postgres, Sqlite, Active Record, Bcrypt

Software & Applications: API (AJAX, Nokogiri, Curl), Bash / Linux

Version Control: Git, Github

WEB APPLICATIONS

Rails Blog // github.com/Timberlee/woofers

A Rails-built, dog-themed blog that allows users to create an account, log in, make posts, and view their own and other users' posts.

- Wrote / read to database with object relational mapping (Active Record)
- Displayed logged in / logged out pages with routing logic
- Displayed current user and all users' posts with routing logic

Startup Crunch // github.com/Timberlee/persephone

Collaboration to build a web app on a deadline. Educates users on natural disaster preparedness and response, and raises awareness of climate change.

- Guided user through narrowing focus based on region
- Displayed graphed data using canvas.js library; retrieved weather news via API
- Enabled facebook user login; encrypted regular login password with BCrypt

Bakery Site // github.com/Timberlee/bakery

A professional website for a bakery that allows customers to view items, their descriptions and prices, and to get a feel for the bakery itself.

- Retrieved API data from Eventbrite for relevant bakery events with Curl Gem
- Centralized products data in Ruby classes for data manipulation and storage
- Tabbed map to allow users to view location
